## PROJECT

---

### Python Banking Program

[GitHub](#)

1. **Show Balance:** Users can view their current account balance formatted to two decimal places.
2. **Deposit Funds:** Users can deposit money into their account. The program checks for valid input, ensuring the amount is positive.
3. **Withdraw Funds:** Users can withdraw money from their account. The program verifies that the user has sufficient funds and that the withdrawal amount is positive.
4. **Exit:** Users can exit the program gracefully.

### Photography Portfolio Website | HTML, CSS, JavaScript

[GitHub](#)

- Developed a visually captivating photography portfolio website to showcase professional work, services, and client engagement.
- Implemented responsive design principles using modern CSS techniques to ensure seamless viewing across devices.
- Integrated intuitive navigation with dynamic content filtering for efficient project browsing.
- Enhanced user engagement by adding interactive features such as contact forms, call-to-action buttons, and smooth scroll-to-top functionality.
- Optimized website performance by minimizing redundant code, improving image loading strategies, and ensuring cross-browser compatibility.
- Applied SEO best practices by incorporating semantic HTML tags, meta descriptions, and optimized content structure.

## CERTIFICATIONS AND ACHIEVEMENTS

---

- Great learning certified: Flask Python, Python, Google Collab
- Microsoft Certified: Data Analytics using Power BI
